Carlisle Residential Offers Superior Insulation with ENbase

(Carlisle, PA) – Carlisle Residential, a leading manufacturer of roofing and waterproofing products, now offers ENbase, a rigid roof insulation composite panel that is composed of a closed-cell polyisocyanurate foam core bonded on one side to oriented strand board and on the other to a fiber-reinforced facer.

Offering a superior combination of high insulating properties and a nailable surface, ENbase is free of ozone depleting properties (ODPs) and provides superior performance and durability for virtually any steep-slope roofing system.

Available in various sizes and thicknesses, ENbase can be used with EcoStar® synthetic tiles, heavyweight shingles and standing-seam metal roofs, as well as tile, slate and single-ply roof systems. ENbase is available with standard, FSR or fire-treated OSB or plywood, and is suitable for new construction and re-roofing projects on both commercial and residential applications.

About Carlisle Residential

As a division of Carlisle Construction Materials, Carlisle Residential offers premium products for residential construction applications, including Carlisle Coatings and Waterproofing's WIP® product lines as well as EcoStar® synthetic slate and cedar shake roofing tiles. For more information about the products and services offered by Carlisle Residential, call 800.211.7170 or visit their web site at www.carlisleresidential.com.
