Self-adhering Flashing  
for Windows, Doors & More

EZ-Flash™ is an economical 20-mil self-adhering flashing that has a wide variety of applications in any construction project including:

- Flashing windows and doors
- Sealing wall sheathing joints
- Finishing roofing details under self-adhesive cap sheets on low-slope roof applications

EZ-Flash is an excellent energy-efficient choice to offer your customers. This self-adhering flashing exhibits a tenacious grip when pressed against the substrate and provides excellent moisture and air leakage protection around openings and over joints/cracks and similar details.

## Easy to Install

With a unique and distinctive black-over-blue design, EZ-Flash is comprised of printed poly film that is laminated with a rubber-modified asphalt adhesive. It offers factory-controlled uniformity with a quick and easy peel-and-stick application. EZ-Flash can easily be applied to horizontal or vertical surfaces and conforms to every angle. The ease and speed of installation offers you a timesaving solution for all of your flashing needs.

## Why Choose EZ-Flash?

- Provides a seal around fasteners and penetrations to prevent leaks
- Simple peel-and-stick application saves time and labor
- Resists mechanical damage
- Easy to install, inspect and repair
- Part of a complete Carlisle Residential building envelope protection system
- Can be installed on concrete, masonry, gypsum, steel and wood substrates

## EZ-Flash Offers Your Customers Increased Energy Efficiency

EZ-Flash increases the thermal performance of a building and reduces moisture-related problems by forming a watertight seal and providing a smooth drainage plane. Increased thermal performance can lead to a reduction in the amount of energy used to heat and cool the building, thus saving the owner on utility costs.

## EZ-Flash Rolls are Available in the Following Sizes:

- 4" x 100'
- 6" x 100'
- 9" x 100'
- 12" x 100'
